

FROG® Phosphate Remover 4Pro™ Earns 2026 MVP Award from Aquatics International

Minnetonka, MN — King Technology®, a leader in water care innovation, announces that its FROG® Phosphate Remover 4Pro™ has been named a 2026 MVP (Most Valuable Product) Award winner by *Aquatics International*. The annual award recognizes the top 25 new products and innovations in commercial aquatics, as selected through online voting by industry professionals.

MVP Award voters include industry professionals who rely on these products in their daily operations, including those who build, own, operate and manage commercial, recreational and municipal pools, spas and waterparks.

FROG 4Pro Pool Pods are thin, fabric pouches prefilled with concentrated dry chemical blends, each engineered to address common pool issues such as cloudy water, phosphate buildup and algae growth.

Rather than measuring and pouring liquids or granules, technicians simply place a pod into the pool's skimmer basket. As the circulation system runs, the pod dissolves—typically within 24 hours—delivering treatment evenly throughout the pool.

Phosphate buildup can contribute to clogged filters and other water quality challenges. By binding and removing phosphates, pool professionals can simplify maintenance and support more consistent water conditions.

FROG Phosphate Remover 4Pro removes phosphates and helps prevent buildup. One pod removes 1,000 ppb of phosphates and helps prevent phosphate buildup for up to one month in pools up to 30,000 gallons.

FROG Phosphate Remover 4Pro joins the award-winning FROG® Algae Blocker 4Pro™, named “Most Innovative Product for Service Professionals” at the 2024 International Pool | Spa | Patio Expo.
