Step 1: Prepare the Hot Tub

1. Fill hot tub with fresh water. If using source water that is high in iron or other metals, see your dealer before filling the hot tub. It may require the use of a metal control product.

2. Clean or replace filter cartridges when dirty. (Follow manufacturer’s instructions).

3. Balance water by following STEPS a – d in order.

   a. Take a water sample from the hot tub and dip a FROG Test Strip into it.

   b. Look at the Total Alkalinity reading first. Adjustments should be made to bring the Total Alkalinity in the range of 80 – 120 ppm prior to making any adjustments to pH even if it throws pH off further.

   c. After Total Alkalinity is in range, test for pH. It should be between 7.2 and 7.8. If higher or lower, add a pH adjuster.

   d. Lastly test for Calcium Hardness. It should be between 150 and 250 ppm. If higher, partially drain the hot tub (about 6 inches) and fill with water low in calcium. If lower, add Calcium increaser.

   If balancing takes longer than 2 days, shock the water and maintain a chlorine level while continuing balancing.

Step 2: Set the Cartridges

1. The FROG Serene Floating System has two replaceable cartridges.

   a. Blue = FROG Serene Mineral Cartridge

   b. Yellow = FROG Serene Bromine Cartridge

2. Set the mineral cartridge to #6 (hold the bottom and turn the top until 6 appears in the setting window). No further adjustments are necessary for the life of this cartridge.

   c. After Total Alkalinity is in range, put the FROG Serene Floating System into the hot tub.

   d. Discard in trash or offer for recycling if available.

Step 3: Put the System to Work

1. Insert both cartridges into the green floating holder by pushing them into the openings until they stay in place.

2. Let the Floating System free-drift in the hot tub.

3. When using the hot tub, simply remove FROG Serene Floating System, drain the water into the hot tub and insert on the side of the hot tub.

4. REMEMBER TO RETURN FROG SERENE FLOATING SYSTEM TO HOT TUB WHEN YOU GET OUT!

Step 4: Routine Hot Tub Care

1. Drain and refill hot tub as directed by your hot tub manufacturer or every four months when FROG minerals need to be replaced.

2. Run filtration system as recommended by your hot tub manufacturer.

3. Regularly test water. Maintain pH, Total Alkalinity and Calcium Hardness levels with the FROG Serene Floating System.

   a. Note: Water balance is affected by barter load, chemical usage, evaporation and the makeup of source water so maintaining water balance regularly is important.

Troubleshooting

- **Very Important!** Establish an initial residual of 5.0–6.0 ppm bromine or chloride. For best results use FROG Jump Start® (EPA Reg. #53735-12) that quickly dissolves with an effervescent action – one packet per 600 gallons. Do not use non-chlorine shock. Confirm proper residual amount before employing FROG Serene Floating System.

- **Heat water to the manufacturer’s recommended temperature.**

- **Check water balance, Ensure pH, Total Alkalinity and Calcium Hardness are correct.**

- **Check FROG Serene Bromine Cartridge.** If empty, replace following directions in Step 3: Put the System to Work.

   a. Make sure your FROG Serene Mineral Cartridge is not older than 4 months as it will be ineffective and more bromine will be required to maintain the hot tub until you replace the minerals.

   b. Shock the hot tub with a non-chlorine shock to regain clarity.

- **Remove the system from the hot tub until the bromine level is down to 2.0 ppm.**

- **Lower the Bromine Cartridge setting by 1 number and replace system in the hot tub.**

- **Test in 24 hours. Repeat process until bromine level stays within 1.0 to 2.0 ppm.**

- **High Bromine Levels**

- **Cloudy Water or Low-Bromine Levels**

- **Replace blue MINERAL CARTRIDGE every four months.**

   a. Discard it in the trash even if it appears to have media left inside.

   b. Don’t attempt to reuse: the minerals are spent after 4 months.

- **Replace yellow BROMINE CARTRIDGE when empty.**

   a. Life of cartridge varies depending on hot tub size and number of users.

   b. Drain water from cartridge to ensure it is empty.

   c. Discard in trash or offer for recycling if available.

For one week test the water daily with FROG Test Strips and adjust cartridge up or down by 1 setting per day until the color on the test strip matches the ideal FROG bromine range of 1.0 to 2.0 ppm.
